Staff Software Engineer | 10+ Years Experience | Enterprise AI | Product Engineering | Frontend Architecture

PROFESSIONAL PROFILE

Staff Software Engineer building AI-powered products and customer-facing platforms. Most recently, I led product engineering for an enterprise AI platform that reduced SOC analysis workflows by **10x** by combining LLMs with thoughtfully designed human-in-the-loop experiences. The products I'm most proud of are the ones that simplify difficult workflows and help people do their best work.

EXPERIENCE

Staff Software Engineer | CAPE.AI 2023 – Present | Remote

Enterprise AI platform helping financial institutions automate complex compliance and risk operations.

- **Enterprise AI:** Architected AI-powered workflows combining LLMs, OCR, RAG, vector search, ontology modeling, and verifiable citations, helping customers reduce SOC analysis by 10x.
- **AI/LLM Integration:** Architected high-performance chat interfaces and workflow runners using **Server-Sent Events (SSE)** to handle streaming LLM responses; implemented complex chunk-processing logic to ensure smooth, real-time UI state updates.
- **Product Engineering:** Directed AI chat, workflow automation, reporting, dashboards, graph visualization, search, onboarding, and platform architecture as the company's sole Front-End Engineer.
- **AI Infrastructure:** Created a structured streaming protocol that transformed raw LLM output into reusable interactive UI powering reports, Jira, Slack, and future AI experiences.
- **Cross-functional Leadership:** Partnered with AI engineers to shape prompts, structured outputs, streaming behavior, backend APIs, and product direction.
- **Platform Ownership:** Extended ownership into Python/FastAPI development while continuing to own frontend architecture, testing strategy, CI/CD, and engineering standards.

Senior Front End Engineer | DAILY HARVEST 2021 – 2023 | Remote

Modernized a high-growth ecommerce platform across web and mobile during its migration from Angular to React.

- **Growth:** Recognized an untapped SEO opportunity, secured engineering investment, and championed an initiative that improved Lighthouse scores by **70%**, increasing search visibility and ecommerce revenue.
- **Platform Engineering:** Shaped React and React Native architecture through Storybook, observability, CI/CD, automated testing, and shared infrastructure that improved developer velocity and release confidence.
- **Cross-Platform Development:** Designed scalable patterns for sharing code between React web and React Native while preserving platform-specific user experiences.
- **Technical Leadership:** Mentored engineers, guided architecture discussions, and partnered with product leadership on long-term platform strategy.

Senior Front End Developer | iHEART MEDIA 2017 – 2021 | Remote / NYC

*Helped modernize one of the world's largest streaming media platforms serving **120M+** listeners.*

- **Media Platform:** Developed flagship customer experiences including the global radio player, podcast ecosystem, creator platform, and embeddable podcast player.
- **Design Systems:** Established a cross-platform design system spanning web, mobile, TVs, and connected devices, enabling faster development while improving accessibility and brand consistency.
- **Leadership:** Mentored engineers, managed direct reports, and helped shape the organization's migration from Angular to React.

Front End Engineer | GEMINI BITCOIN EXCHANGE 2016 – 2017 | NYC

Built secure customer-facing fintech applications while helping evolve frontend architecture during rapid startup growth.

Software Engineer | GOPRO 2013 – 2016 | San Francisco

Developed ecommerce experiences and authored the company's frontend style guide, establishing reusable UI standards across engineering teams.
